ABOUT
WHAT ARE SDGs?
The Sustainable Development Goals are a call for action by all countries – poor, rich and middle-income – to promote prosperity while protecting the planet. They recognize that ending poverty must go hand-in-hand with strategies that build economic growth and address a range of social needs including education, health, social protection, and job opportunities, while tackling climate change and environmental protection.
1 NO POVERTY
2 ZERO HUNGER
3 GOOD HEALTH AND WELL-BEING
4 QUALITY EDUCATION

Comparison on Houses Listed vs Sold
Highlights
The average number of houses listed per year is 5285 , with a peak at 8364. Perhaps high market activity or favourable market conditions led to this surge.
On average 3091 houses were sold each year, hitting a maximum of 3935 possibly this is due to increased demand of affordable pricing schemes
The range of houses listed (4815) significantly exceeds the range of houses sold (1652), suggesting a potential imbalance between supply and demand

Average House Price
Definition
Average house price measures the average price of homes listed in the Multiple Listing Service database used by Canadian realtors.
Why This Matters
Housing is usually the largest component of a households wealth. When housing prices go up, homeowners net worth increases, and they tend to be willing to spend more and take on additional debt. This has a significant positive impact on the economy.
Conversely, when housing prices decrease, households find it more difficult to borrow (as their equity has decreased), and rather than spending, they tend to try to pay off their mortgages faster.
Measurement and Limitations
Average house price measures average residential detached housing prices listed in the Multiple Listing Service (MLS) system - this means that private sales may not be included. Rates are seasonally adjusted.
