

Topics that are considered in low-fidelity diagram:

- **Affordances:**
 - Interactive elements: I have included clear visual cues (buttons, links, icons) indicate interactivity for elements like "Interactive wheel."
 - Language selection: Included a language selection button because target audience may speak multiple languages.
 - Accessibility: Prioritized accessibility by following WCAG guidelines, including alternative image text, and keyboard navigation.
- **Gestalt Principles:**
 - Proximity: Group related information is closer for better understanding.
 - Similarity: I will consider using a unified color scheme (e.g., Regina's city colors or relevant SDG palettes) for a cohesive look.
 - Figure-ground: I will ensure sufficient text-background contrast for optimal readability.
- **Constraints:**
 - Content hierarchy: Established a clear hierarchy with headings, font sizes, and spacing to guide users through the content.
 - Limited information: Consulted customers to gather feedback on their needs and refine the design for usability.
