Low Fidelity Prototype links

Constraints: The low fidelity prototype shows a basic outline of the prototype of the website. The constraints were the text being at an angle with the pin wheel navigation, along with certain fonts and font sizes being used.

Gestalt Principles: The low fidelity prototype shows one of the Gestalt Principles which is closure. My prototype displayed the dome as the home page, even though it was sliced up, it displayed closure even though the parts of the dome were split apart.

Affordances: Affordances can be displayed through my prototype by the buttons that can be used to navigate each SDG. When selecting an SDG, there will be a brief overview of the SDG then on the side, there will be a panel displayed which can go more in depth of the SDG that was chosen.
