

### **Customer Check-in #3 Notes:**

- **General Notes:**

- Colour scheme should match UN SDGs website colours.
- Remove leaves from the background and change the background colour.
- Icons and colours should be taken from UN SDGs website.
- Use only that graphics/info which add values to your website instead of just fillers.
- Make pages more scrollable.

- **Home/Landing Page:**

- Home Page needs a title, navigation tool and some context on what the website is for. Needs more separation in the wheel design.
- For about section on home: Who we are? This page is Community Indicator System for Regina. To talk about most pressing issues in Regina and how those connect to UN SDGs.

- **About Page:**

- What are SDGs? This section is good enough but What is the SDG framework? And how this connects to local (Regina). We can find more information about that on searching “SDGs Localization”. Drawing a connection on why we are mapping Regina’s issues to this framework and why is that important. When hovering over the individual SDG icon, a little bit of info about that SDG should be enough.

- **Category Page:**

- Change the facts section to context on the category. Instead of using real world images just stick with infographics.
- Match the layout and colour with other pages.

- **Data Page:**

- Data and info side by side is preferable.
- Remove the SDGs button and only link to RSDGs website about page.
